# Range of Reactions To Expect in the AGID (Coggins) Test

NEGATIVE

Intensity of Positive Reactions—strongest (5) to weakest (1)

Rare

Most positive field samples with reaction intensity between 2 and 4

Reference positive serum

NEGATIVE

Slight outward arc of reference lines

## ADDITIONAL POSSIBILITIES:

Nonspecific Line  
Negative

Nonspecific Line Positives

and Negative/?

## Notes

Interpret all samples according to the termination of control reference positive lines.

When in doubt, or if qualified readers disagree, samples should be forwarded to a reference laboratory. Supplemental testing and/or an additional sample, collected at a later date, may be required to accurately determine the status of the horse.

If you get a second sample, test both at the same time and compare reactions.

To contact the authors of this Program Aid for more information, please see reverse.
